## **Contact Info**

**Name:** Robert B. Reese

**Email:** reese@ece.msstate.edu

**Phone Number:** Reese – 662 325 3154 (Principle Contact)

**Address:** Electrical & Computer Engineering Department, Box 9571,  
Mississippi State University, MS 39762

**TITLE:** *Microprocessors: Assembly to C with the PIC18Fxx2*

**ISBN:** 1-58450-378-5

Jerry W. Bruce is the author of Chapter 12, Data Conversion.

## **DRAFT: Table of Contents**

1. Number System and Digital Logic Review
  - 1.1 Learning Objectives
  - 1.2 Binary Data
  - 1.3 Unsigned Number Conversion
  - 1.4 Binary and Hex Arithmetic
  - 1.5 Combinational Logic Functions
  - 1.6 Combinational Building Blocks
  - 1.7 Sequential Logic
  - 1.8 Sequential Building Blocks
  - 1.9 Encoding Character Data
  - 1.10 Summary
  - 1.11 Review Problems
2. The Stored Program Machine
  - 2.1 Learning Objectives
  - 2.2 Problem Solving the Digital Way
  - 2.3 Finite State Machine Design
  - 2.4 A Stored Program Machine
  - 2.5 Modern Computers
  - 2.6 Summary
  - 2.7 Review Problems
3. Introduction to the PIC18xx2
  - 3.1 Learning Objectives
  - 3.2 Introduction to Microprocessors and Microcontrollers
  - 3.3 The PIC18Fxx2 Microcontroller
  - 3.4 Data Memory Organization and Data Transfer
  - 3.5 Basic Arithmetic and Control Instructions
  - 3.6 A PIC18 Assembly Language Program
  - 3.7 The Clock and Instruction Execution
  - 3.8 Summary

- 3.9 Review Problems
- 4. Unsigned 8-bit Arithmetic, Logical, Conditional Operations
  - 4.1 Learning Objectives
  - 4.2 Bitwise Logical Operations, Bit Operations
  - 4.3 The STATUS Register
  - 4.4 Unsigned Conditional Tests
  - 4.5 Looping
  - 4.6 Shifts and Rotates
  - 4.7 Summary
  - 4.8 Review Problems
- 5. Extended Precision and Signed Operations
  - 5.1 Learning Objectives
  - 5.2 Extended Precision Integers
  - 5.3 Extended Precision Operations
  - 5.4 Signed Number Representation
  - 5.5 Two's Complement Overflow
  - 5.6 Operations on Signed Data
  - 5.7 Branch Instruction Encoding
  - 5.8 Summary
  - 5.9 Review Problems
- 6. Subroutines and Pointers
  - 6.1 Learning Objectives
  - 6.2 Subroutines
  - 6.3 The Stack and Call/Return
  - 6.4 Implementing Subroutines in Assembly Language
  - 6.5 Arrays and Pointers in C
  - 6.6 Arrays and Pointers in Assembly Language
  - 6.7 Accessing Table Data from Program Memory
  - 6.8 Subroutines and Stack Frames: Dynamic Allocation
  - 6.9 Summary
  - 6.10 Review Problems
- 7. Advanced Assembly Language: Higher Math
  - 7.1 Learning Objectives
  - 7.2 Multiplication
  - 7.3 Division
  - 7.4 Fixed-Point and Saturating Arithmetic
  - 7.5 Floating-Point Number Representation
  - 7.6 BCD Arithmetic
  - 7.7 ASCII Data Conversion
  - 7.8 Summary
  - 7.9 Review Problems
- 8. PIC18F242 Hardware Startup and Parallel Port IO
  - 8.1 Learning Objectives
  - 8.2 High Level Languages versus Assembly Language
  - 8.3 C Compilation for the PIC18F2142
  - 8.4 PIC18F242 Startup Schematic

- 8.5 *ledflash.c* – The First C Program for PIC18F242 Startup
- 8.6 Datasheet Reading – A Critical Skill
- 8.7 PIC18Fxx2 Reset Sources
- 8.8 Experimenting with Reset, SLEEP and the Watchdog Timer
- 8.9 Parallel Port Operation
- 8.10 LED/Switch IO and State Machine Programming
- 8.11 Interfacing to a LCD Module
- 8.12 Summary
- 8.13 Review Problems
- 9. Asynchronous Serial I/O
  - 9.1 Learning Objectives
  - 9.2 IO Channel Basics
  - 9.3 Synchronous Serial IO
  - 9.4 Asynchronous Serial IO
  - 9.5 The PIC18Fxx2USART
  - 9.6 The RS232 Standard
  - 9.7 Serial IO Examples
  - 9.8 Summary
  - 9.9 Review Problems
- 10. Interrupts and a First Look at Timers
  - 10.1 Learning Objectives
  - 10.2 Interrupt Basics
  - 10.3 PIC18 Interrupt Details
  - 10.4 Interrupt-Driven Asynchronous Serial Data Input
  - 10.5 Using a Software FIFO with Interrupt-Driven IO
  - 10.6 Other Interrupt Sources, Sleep Mode
  - 10.7 State Machine Programming for Interrupt-Driven IO
  - 10.8 The Timer Subsystem: Timer2
  - 10.9 Switch Debouncing using a Timer
  - 10.10 A Rotary Encoder Interface
  - 10.11 A Numeric Keypad Interface
  - 10.12 On Writing and Debugging ISRs
  - 10.13 Summary
  - 10.14 Review Problems
- 11. Synchronous Serial I/O
  - 11.1 Learning Objectives
  - 11.2 The PIC18 and Synchronous Serial IO
  - 11.3 USART Synchronous Mode
  - 11.4 The Serial Peripheral Interface (SPI)
  - 11.5 SPI Examples: A Digital Potentiometer and a Serial EEPROM
  - 11.6 The I<sup>2</sup>C Bus
  - 11.7 I<sup>2</sup>C on the PIC18Fxx2
  - 11.8 The 24LC515 Serial EEPROM
  - 11.9 Double Buffering for Interrupt-driven Writes
  - 11.10 Summary
  - 11.11 Review Problems

- 12. Data Conversion
  - 12.1 Learning Objectives
  - 12.2 Data Conversion Basics
  - 12.3 Analog-to-Digital Conversion
  - 12.4 PIC18Fxx2 Analog-to-Digital Converter
  - 12.5 Digital-to-Analog Conversion
  - 12.6 Digital-to-Analog Converter Example: The MAXIM 518
  - 12.7 Summary
  - 12.8 Review Problems
- 13. Timers
  - 13.1 Learning Objectives
  - 13.2 The Timer0 Subsystem
  - 13.3 The Timer1 and Timer3 Subsystems
  - 13.4 Pulse Width Measurement Using Capture Mode
  - 13.5 Timer1/Timer3 Compare Mode
  - 13.6 Using Capture Mode for Infrared Decoding
  - 13.7 Timer2 and Pulse Width Modulation
  - 13.8 Using Capture Mode for Frequency Measurement
  - 13.9 Summary
  - 13.10 Review Problems
- 14. Capstone: Audio Sampling, A Monitoring System, and an Autonomous Robot
  - 14.1 Learning Objectives
  - 14.2 Design of an Audio Record/Playback System
  - 14.3 Implementation of an Audio Record/Playback System
  - 14.4 Design of a Home Monitoring System
  - 14.5 The DS1621 Digital Thermometer
  - 14.6 Using the Non-Volatile Storage on the PIC18Fxx2
  - 14.7 Implementation of a Home Monitoring System
  - 14.8 Design and Implementation of an Autonomous Robot
  - 14.9 Summary
  - 14.10 Suggested Project Modifications
- 15. Beyond the PIC18Fxx2
  - 15.1 Learning Objectives
  - 15.2 External Memory Interfacing
  - 15.3 Other PIC Family Members
  - 15.4 Bus Arbitration in I<sup>2</sup>C
  - 15.5 The Controller Area Network (CAN)
  - 15.6 The Universal Serial Bus (USB)
  - 15.7 A Brief Survey of non-PIC Microcontrollers
  - 15.8 Real Time Operating Systems
  - 15.9 Summary
  - 15.10 Suggested Survey Topics

## Appendices

- A. PIC18Fxx2 Architecture, Instruction Set, Register Summary

- B. MPLAB Quickstart
- C. HI-TECH PICC-18 C Compiler Demo for the PIC18F242
- D. Notes on the C Language
- E. Suggested Laboratory Exercises
- F. The Jolt/Colt Serial Bootloaders
- G. Circuits 001
- H. References
- I. Answers to Review Problems
- J. About this CDROM
